

YOUR RVG WIND VANE HAS BEEN PAINTED WITH  
MICRON 33 ANTI-FOULING PAINT.

So that you can properly take care of the anti-fouling finish that is on your RVG Wind Vane let us first explain how we applied the finish.

1. We roughed up all surfaces to be painted with 120 grit sandpaper then painted them with INTER-LUX 353/354 "Prime Wash Base", a two part primer, yellow in color, not unlike zinc chromate.
2. After waiting one hour we coated the RVG with INTER-LUX #66 "TRI-LUX" a dark blue vinyl base anti-fouling paint.
3. After an overnight drying period we coated the RVG with # 460 INTER-LUX MICRON 33.

You should be able to periodically just paint another coat of MICRON 33 on your RVG unless you are through the TRI-LUX, then it may be necessary to return to one of the earlier steps or even take it down all the way and start over.

If you have any questions or problems contact your INTER-LUX Dealer or International Marine Manufacturing Corp.. at (305) 255-3939
